

Scenario Name - Search Functionality

Weak Prompt -Test the search feature

What I Feel is Missing -

- a. doing image search like in Amazon or only text search as in swiggy app
- b. Partial text search is there or search begins only after entire text is written
- c. Role is not Set, Example is not given
- d. Did not talk about performance- how can search be done in the background- once saturated, whats the msg to be thrown

I - Instruction

Generate manual test cases covering positive, negative, boundary, performance, and filter/sort scenarios for the search functionality.

C

Context

What is the application, environment, or domain?

This is health care application like Apollo App- User will search about Doctors availability and book appointment. Filters are language, Dr availability through online or Direct viist at hospital, hospital near by you

Search should load in 5 secs

E

Example

Search the keyword as Ortho- show data related to Orthopedical, Ortho Surgery -related drs around the location

TC001 | Search using Doctor Name |nter "iPhone 16" |Relevant Dr should be listed.

P

Persona

Act as QA Engineer with 12 years of experience

O

Output Format

How should the output be structured? (Table, Gherkin, numbered list)

Provide results in a table with:

- Test Case ID
- Scenario
- Test Steps
- Test Data
- Expected Result
- Priority

T

Formal, Technical, Simple — who is the audience?

Professional

Weak Prompt- Test the functionality

If you mean **test cases for a Search functionality** (common web/app search bar), here are sample test cases:

TC ID	Test Case	Expected Result
TC_01	Search using a valid keyword	Relevant search results are displayed
TC_02	Search using an exact item name	Exact matching result appears
TC_03	Search using a partial keyword	Matching results are displayed
TC_04	Search using uppercase letters	Search should be case-insensitive

TC ID	Test Case	Expected Result
TC_05	Search using lowercase letters	Correct results are displayed
TC_06	Search with leading/trailing spaces	Spaces are trimmed and results shown
TC_07	Search with special characters	System handles input gracefully
TC_08	Search with numbers only	Relevant numeric results are displayed
TC_09	Search with alphanumeric text	Appropriate results are shown
TC_10	Search with an empty field	Validation message or no action occurs
TC_11	Search using a non-existing keyword	"No results found" message displayed
TC_12	Press Enter after typing keyword	Search is executed
TC_13	Click Search button	Search is executed
TC_14	Verify search result count	Count matches displayed results
TC_15	Verify search response time	Results load within acceptable time
TC_16	Search with very long text input	System handles without crashing
TC_17	Verify pagination in results	Next/Previous pages work correctly
TC_18	Verify sorting of search results	Results are sorted as per requirement
TC_19	Verify search history (if available)	Previous searches are displayed correctly
TC_20	Verify security against SQL injection/XSS	Malicious input is sanitized

Negative Test Cases

1. Search with only spaces.
2. Search with unsupported characters.
3. Search with script tags (<script>).
4. Search with SQL injection strings (' OR 1=1 --).
5. Search when backend service is unavailable.

Performance Test Cases

- Verify search with large datasets.
- Verify concurrent searches by multiple users.

- Verify response time under load.

If this is for a specific application (Amazon, Flipkart, Jira, banking app, etc.), share the functionality or screen and I'll write detailed test cases in a professional QA format (Test Case ID, Preconditions, Steps, Test Data, Expected Result, Priority).

For Icepot:

Below is a comprehensive set of manual test cases for the **Doctor Search & Appointment Booking functionality** in a healthcare application similar to Apollo.

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC001	Search using Doctor Name	1. Open Search page 2. Enter Doctor Name 3. Click Search	Dr. Rajesh Kumar	Matching doctor should be displayed	High
TC002	Search using Specialty	Enter specialty keyword and search	Ortho	Orthopedic doctors around the selected/current location should be listed	High
TC003	Search using Partial Specialty Name	Enter partial keyword and search	Orth	Relevant specialties and doctors should be displayed	High
TC004	Search using Specialty Variation	Search using alternate specialty text	Ortho Surgery	Orthopedic surgeons should be displayed	High
TC005	Search using Hospital Name	Enter hospital name and search	Apollo Chennai	Doctors associated with the hospital should be displayed	Medium
TC006	Search using Exact Doctor Name	Search using complete doctor name	Dr. Meena Krishnan	Exact doctor should appear at the top of results	High
TC007	Search with Uppercase Characters	Enter search text in uppercase	ORTHO	Search should be case-insensitive	Medium
TC008	Search with Lowercase Characters	Enter search text in lowercase	ortho	Relevant results should be displayed	Medium

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC009	Search with Leading Spaces	Search with spaces before keyword	" ortho"	Spaces should be ignored and valid results displayed	Medium
TC010	Search with Trailing Spaces	Search with spaces after keyword	"ortho "	Spaces should be trimmed	Medium
TC011	Search with Mixed Case	Search with mixed case text	OrThO	Results should match irrespective of case	Medium
TC012	Search using Nearby Location	Search specialty with location enabled	Ortho	Nearby doctors should be displayed based on user location	High
TC013	Search with No Matching Data	Search unavailable specialty	XYZ123	"No Doctors Found" message should be displayed	High
TC014	Search with Empty Input	Click search without entering text	Blank	Validation message or default behavior should be shown	High
TC015	Search using Special Characters	Enter special characters	@#\$%^	Appropriate validation/error handling should occur	Medium
TC016	Search using Numeric Input	Enter numbers only	12345	System should handle gracefully and display relevant results or no results	Low
TC017	Search using Long Input String	Enter maximum allowed characters	256+ chars	Application should not crash and should handle input properly	Medium
TC018	Search Result Navigation	Click doctor from search results	Dr. Rajesh Kumar	Doctor profile page should open	High
TC019	Book Appointment from Search Result	Select doctor and click Book Appointment	Ortho Doctor	Appointment booking flow should start successfully	High

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC020	Verify Search Response Time	Search for specialty	Ortho	Results should load within 5 seconds	Critical

Filter Validation

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC021	Filter by Language	Search doctors and select language filter	Tamil	Only Tamil-speaking doctors should be displayed	High
TC022	Filter by English Language	Apply English filter	English	Only English-speaking doctors should be listed	Medium
TC023	Filter by Online Consultation	Apply Online filter	Online	Only doctors available for online consultation should appear	High
TC024	Filter by Hospital Visit	Apply Direct Visit filter	Direct Visit	Only doctors available for hospital consultation should appear	High
TC025	Filter by Nearby Hospital	Apply Nearby Hospital filter	Within 5 km	Doctors from nearby hospitals should be displayed	High
TC026	Apply Multiple Filters	Apply Language + Online	Tamil + Online	Doctors matching both filters should be displayed	High
TC027	Apply All Filters Together	Language + Online + Nearby Hospital	Tamil + Online + 5 km	Only matching doctors should appear	High
TC028	Remove Applied Filter	Apply then remove Language filter	Tamil	Search results should refresh accordingly	Medium
TC029	No Data for Applied Filters	Apply restrictive filters	Hindi + Online + 2 km	Appropriate no-results message should be displayed	High

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC030	Verify Filter Persistence	Apply filter and navigate back	Tamil	Applied filters should remain selected as per requirement	Medium

Sorting Validation

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC031	Sort by Nearest Distance	Apply sort option	Nearest	Doctors should be sorted by distance ascending	High
TC032	Sort by Availability	Apply sort	Available Today	Doctors available today should appear first	High
TC033	Sort by Experience	Apply sort	Experience	Doctors should be sorted by experience	Medium
TC034	Sort by Ratings	Apply sort	Highest Rated	Highest rated doctors should appear first	Medium
TC035	Verify Sort Retention After Filter	Apply filter and sort	Tamil + Nearest	Both filter and sort should remain active	Medium

Boundary Test Cases

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC036	Search with Minimum Character Limit	Enter minimum allowed characters	0	System should behave as per requirement (search/suggestion/validation)	Medium
TC037	Search with Maximum Character Limit	Enter max supported characters	255 chars	System should accept input without issue	Medium
TC038	Search with Maximum Filters Applied	Apply all available filters	All filters	Results should be displayed correctly	Medium

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC039	Search Near Distance Boundary	Search within exact distance limit	5 km	Doctors within boundary should be included	Medium
TC040	Search Beyond Distance Boundary	Search beyond distance limit	5.1 km	Doctors outside range should not appear	Medium

Negative Test Cases

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC041	SQL Injection Validation	Enter SQL script	' OR 1=1 --	Input should be sanitized and application should remain secure	Critical
TC042	XSS Validation	Enter script tag	alert('XSS')	Script should not execute	Critical
TC043	Search During Network Failure	Disable network and search	Ortho	Appropriate error message should be displayed	High
TC044	Search During Server Timeout	Simulate timeout	Ortho	User-friendly timeout message should be shown	High
TC045	Invalid Filter Combination	Apply conflicting filters	Online + Direct Visit (if mutually exclusive)	Appropriate handling should occur	Medium

Performance Test Cases

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC046	Search Performance - Specialty	Search common specialty	Ortho	Results should load within 5 seconds	Critical

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC047	Search Performance - Doctor Name	Search doctor name	Dr. Rajesh Kumar	Results should load within 5 seconds	Critical
TC048	Search with Multiple Filters	Search with all filters applied	Tamil + Online + Nearby	Results should load within 5 seconds	Critical
TC049	Concurrent User Search	Multiple users search simultaneously	1000+ users	Search should remain responsive	High
TC050	Large Data Volume Search	Search common specialty with large dataset	General Physician	Results should load within SLA without errors	High

These 50 test cases provide coverage for **functional, negative, boundary, filter, sort, security, and performance testing** and are suitable for a QA test design review in a healthcare appointment-booking application.

My Observation:

1. Weak prompt is very vague and generic and ICEPOT is conceptualized looks like the one who executes know the application well and mainly he knows what to expect
2. First one do not have an example whereas in the second one- I have given example as Apollo- so the LLM thinks of apollo and gives the exact scenarios I want even when I did not upload any Mock up image
3. Performance Requirement is not given earlier
