

Scenario Name - **Mobile App — OTP Login**

Weak Prompt -Test OTP login on mobile

What I Feel is Missing -

- a. Sms otp or whatsapp OTP
- b. How long otp are valid
- c. How many digits otp
- d. How many retry attempts are possible
- e. Mobile number entry field is missing

ICEPOT:

I - Instruction

1. Generate manual test cases covering positive, negative, boundary, performance scenarios for Mobile OTP verification.
2. 4 digits otp – sms should be sent
3. Maximum of 3 attempts
4. After 3 attempts, show the msg as 'Wait for 24 hrs to send the otp again' kinda msg
5. Send to both Android and iPhone
6. Mobile number is mandatory to send otp – don't enable otp button if mobile number is not fed

C

Context

What is the application, environment, or domain?

This is a banking mobile applicationExample

Enter mobile no- 1234567890

OTP – 123456

TC001 | Enter valid OTP within expiry period |

OTP: 123456 |

User should be logged in successfully.

Persona

Act as Senior QA Engineer with 12 years of experience

O

Output Format

How should the output be structured? (Table, Gherkin, numbered list)

Provide results in a table with:

- Test Case ID
- Scenario
- Test Steps
- Test Data
- Expected Result
- Priority

- Test Data

- Expected Result

- Priority

Professional

Weak Prompt- Test OTP login on mobile

TC ID	Test Scenario	Expected Result
OTP_01	Enter correct OTP within expiry time	User verified successfully, proceeds to next screen
OTP_02	Auto-read OTP from SMS (if enabled)	OTP field auto-filled, verification succeeds
OTP_03	Copy-paste OTP from SMS	OTP accepted, verification successful
OTP_04	Request OTP again after timer countdown	New OTP sent, old OTP invalidated
OTP_05	Enter OTP with leading/trailing spaces (trimmed)	Spaces ignored, OTP verified successfully

For Icepot:

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC001	Verify OTP sent to valid mobile number	Enter valid mobile number and click Send OTP	1234567890	OTP SMS is sent successfully	High
TC002	Verify successful login with valid OTP	Enter valid mobile number, enter correct OTP	Mobile: 1234567890, OTP: 1234	User is logged in successfully	High
TC003	Verify OTP received on Android device	Request OTP from Android device	Android Device	OTP SMS received successfully	High
TC004	Verify OTP received on iPhone device	Request OTP from iPhone	iPhone Device	OTP SMS received successfully	High

Test Case ID	Scenario	Test Steps	Test Data	Expected Result	Priority
TC005	Verify OTP can be entered manually	Enter received OTP manually	OTP: 1234	OTP validation succeeds	Medium
TC006	Verify Send OTP button enabled after entering valid mobile number	Enter valid 10-digit mobile number	1234567890	Send OTP button becomes enabled	High
TC007	Verify OTP sent multiple times before reaching limit	Request OTP multiple times	Valid mobile number	OTP sent successfully as per business rules	Medium
TC008	Verify OTP delivery under normal network conditions	Request OTP	Valid mobile number	OTP delivered within SLA	Medium
TC009	Verify login immediately after OTP receipt	Enter OTP immediately	OTP: 1234	Login successful	Medium
TC010	Verify OTP functionality after app relaunch	Relaunch app and enter OTP	OTP: 1234	OTP validation works correctly	Medium

My Observation:

1. Better testing since nature of the application is understood
2. Good Business Rules are given in ICEPOT
3. Domain specific testcases are generated in ICEPOT
